# Access rights by user type for SAP® Business ByDesign™

What is SAP® Business ByDesign™?

The SAP® Business ByDesign™ solution enables customers to run their entire business with a single, cloud-based application. SAP Business ByDesign is ideally suited for small to medium size companies and subsidiaries of large companies. Customers can get a fast start with a clearly defined scope and then activate additional functionalities to manage processes such as financials, customer relationships, human resources, procurement, and supply chain. SAP Business ByDesign is a software-as-a-service solution that is delivered in the cloud and does not require an additional IT investment.

A Compelling, Subscription-Based Pricing Model

SAP Business ByDesign is licensed through monthly subscription fees, calculated on a named-user basis. The pricing schedule identifies three categories of users: advanced users, core users and self-service users. Users are organized according to a pyramid. All functionality of the lower user type is included in the above user type. Pricing and functionality vary for each category. You don't need to worry about software system maintenance; all core services such as backup, recovery, and regular upgrades are covered by SAP and included in the monthly fee. You can choose to deploy the complete solution, or you can address your immediate business needs first, and grow from this foundation.

Advanced User

Core User

Self-Service User

Self-Service Users

A Self-Service user is the leanest version of the provided user types. It allows to access SAP Business ByDesign, using the offered Self-Service transactions on the Home UI and is enabled for some execution tasks and time recording capabilities.

Core Users

A Core User Type can fulfill daily business tasks all over. Starting from master data creation to proceeding all covered Business Process Procedures steps. Besides this, all approval tasks, independent in which application area, can be processed by a Core User. It includes all Work Centers of the Self-Service User.

Advanced Users

The Advanced User Type does include all available Work Centers, including all Work Centers of a Core and Self-Service user. This user is necessary for Key users and Administrators roles to be able to access Business Configuration, Application and User Management but also for Business Analytics, Service Control Center and PDI access. Beside this, it includes all Work which are necessary to operate a daily work in the system.

General Features

Included: Upgrades, 24x7 support, backup, recovery, system management, mobile access, SAP App Center integration, Microsoft Excel integration

Additional Fees

Dedicated server
Test Instance for own extension development
Development Environment (Cloud Application Studio)
Additional Country Support (3 country versions included)

Included Items

Storage, upgrades, 3 country-specific versions (out of 19), system management, support and backup, 2 advanced users, 3 core users, and recovery are included in the monthly subscription fee.

SAP partners, available around the world, can tailor the solution to your specific needs or industry. They can provide a growing range of services and certified add-on solutions that you can select and activate using the online SAP App Center.
